**Ethos in Time: Nurse Theorist Katie Eriksson as Remembered by Dr. Jessica Hemberg**

by Jessica Hemberg, RN, PhD<sup>1</sup> and Mary Morrow, RN, PhD<sup>2</sup>

**Abstract:** The year 2022 is *Nursing Science Quarterly's* 35<sup>th</sup> year in publication and we are dialoging with nurse theorists. We hope to uncover influences and origins of their theoretical thinking and hear about their current projects related to nursing science. In this scholarly dialogue column, we dialogue with Dr. Jessica Hemberg, a former nursing student of nurse theorist Dr. Katie Eriksson who was internationally known for her theory of caritative caring. In 1986 Professor Eriksson was invited to create a caring science academic program at Åbo Akademi University in Vaasa, Finland which drew graduate students from all Nordic countries. Eriksson's work highlighted the uniqueness and dignity of the human being and the importance of protecting the vulnerable suffering human being. Dr. Eriksson passed away in 2019, and we are grateful to spend some time with one of her PhD students.

**Key words:** nursing theory, nursing science, theory of caritative caring, suffering

**Ethos in Time: Nurse Theorist Katie Eriksson as Remembered by Dr. Jessica Hemberg**

2022 is *Nursing Science Quarterly*'s 35th year in publication, and to celebrate I have had the privilege of dialoging with nurse theorists. The hope was to uncover influences and origins of their theoretical thinking and hear about their current projects related to nursing science. This column is dedicated to Dr. Katie Eriksson (1943-2019) from Finland who is internationally known for her theory of caritative caring. Eriksson had a masters and a licentiate in philosophy, and a education doctorate where she studied the nursing process (Fagerström, 2019). Professor Eriksson served as president of the Helsinki Health Care Institute (1975-1986) where she developed an academic program for nursing with Helsinki University. In 1986 she was invited to create a caring science academic program at Åbo Akademi University in Vaasa, Finland which drew graduate students from all Nordic countries. She was also a professor of Medical Faculty at Helsinki University, and honorary doctor at the Nordic School of Public Health in Gottenberg (1998) and at Karstad University (2013). Dr. Jessica Hemberg, a former nursing student of Eriksson and current senior lecturer and associate professor at Åbo Akademi University, graciously agreed to share her knowledge of Eriksson, as well as her own continuing work in nursing science.

**Mary Morrow (MM):** Hello Dr. Hemberg and thank you so much for taking the time to tell us about Professor Katie Eriksson. How did you meet Dr. Eriksson?

**Jessica Hemberg (JH):** My first meeting with Professor Katie Eriksson occurred in the late 1990's through her various texts which I read during my studies to become a nurse and a public health nurse. I remember being strongly attracted by her deep, philosophical thoughts about the uniqueness and dignity of the human being and the importance of protecting the vulnerable suffering human being. Never had I read such human science and ethical texts about the human being, health, suffering, ethos, and about caring. I

1  
2  
3 became very fascinated and increasingly curious about these ontological questions and  
4 concepts of suffering and health, especially the idea of ethos and caritas. She wrote  
5 deeply about suffering which I had never read before. I was younger then and while some  
6 students had difficulty understanding her work, it was really clear to me. I was  
7 immediately captured by her text, therefore I continued to read Eriksson.

14  
15  
16 Caring for the patient according to Eriksson concerns a will to do good, by the means of  
17 tending, playing, and learning, and one can mediate faith, hope, and love. Caring is fulfilled in a  
18 *caring communion*, which is characterized as caring with warmth, respect, honesty, and  
19 tolerance. Ethos is the core of caring and the core mission of caring is to alleviate the human  
20 being's suffering in a spirit of faith, hope, and love thereby enhancing dignity. I was attracted to  
21 it immediately, maybe because personally I have strong empathetic feelings and feel strongly  
22 about unethical treatments.

31  
32 Eriksson was always very bold, especially when she launched her theories and the idea of  
33 the human being as a unit of body, soul, and spirit in 1987. It was not immediately accepted with  
34 open arms. Her idea that the patient is a suffering human being also aroused resistance but  
35 opened up a whole new way of thinking both in theory and in practice especially as a way for  
36 caregivers to truly see the patient. In the Nordic tradition of caring science Eriksson was already  
37 a pioneer since earlier in the 1980s she claimed that health was more than soundness in body and  
38 mind. In the Nordic countries at that time sickness was seen as opposite of health; however,  
39 Eriksson disagreed saying they are not on the same dimension. An important finding in the  
40 development of Eriksson's caritative caring theory was that one could experience health despite  
41 having a medical diagnosis or illness. This thus confirmed that the human being could be healthy  
42 whilst simultaneously suffering from an illness/illnesses. Furthermore, in her theory of caritative

1  
2  
3 caring, suffering was deeper than just a physical dimension and was on the same dimension as  
4  
5 health. Suffering involves the whole human being (body, soul, and spirit), whereas sickness  
6  
7 refers to body. Eriksson's division of the concept of suffering into *suffering due to illness*, *life-*  
8  
9 *suffering*, and above all, *suffering caused by care* was also an eye-opener that deepened the  
10  
11 understanding of suffering and what it can mean to contribute to more dignified and ethical care.  
12  
13

14  
15 My first actual meeting with Professor Eriksson took place in the 2000s, when after  
16  
17 graduating as a nurse/public health nurse, I immediately started my master's studies in caring  
18  
19 sciences at Åbo Akademi University and later as a doctoral student at the Department of Caring  
20  
21 Sciences. I was so interested in her theories I wanted to continue my education right away, even  
22  
23 though I was working. I had the great honor of having Professor Eriksson as a supervisor for my  
24  
25 doctoral thesis, together with the main supervisor Associate Professor Lisbet Nyström.  
26  
27

28  
29 Professor Eriksson had a warm personality and was very humble. She had the unusual  
30  
31 ability to inspire new thinking in her students, while also being a good listener. Even though she  
32  
33 was very clear and straightforward with her own ideas, it was lovely that she was open to what I  
34  
35 suggested say for a survey. As doctoral students we also had the privilege of listening to her  
36  
37 lectures where she would spontaneously draw models on the board. We were so inspired and full  
38  
39 of ideas at the end of class. Sometimes both she and Dr Lindström lectured together and  
40  
41 discussed and from time to time they had different opinions. It was a once in a moment/historical  
42  
43 time to be in that room with these two deep thinkers.  
44  
45

46  
47 A strong memory that I carry with me is when she personally congratulated me on my  
48  
49 completed doctoral thesis. We were in the coffee room, and she took my hands in hers and said  
50  
51 that my monograph thesis was a very fine book; but she also said that it might be just like when  
52  
53 she herself came out with her new theories, that it will arouse some resistance and cannot be  
54  
55  
56  
57  
58  
59

2  
3 directly received with open arms. Then she looked at me in the eyes, while still holding my  
4 hands in hers, and said: "But in time, when the time is ripe (*mature*), they will understand."  
5  
6

7 My thesis, *The Source of Life, Love – Health's Primordial Wellspring of Strength*  
8 (Hemberg, 2015) was basic research that focused on the ethos of health and the human being's  
9 becoming or evolving towards health. The thesis explored and deepened the knowledge of health  
10 and becoming in health, among other things, through analysis of Kierkegaard's (1847) work, *The*  
11 *Gifts of Love* and interviews with respondents who have lived through severe personal suffering  
12 and found their way back to life and health.  
13  
14

16  
17  
18  
19  
20

21 The new understanding from my research, showed that the human beings' source of  
22 strength is love, the essence and origin of life. Eriksson (1989) had shown earlier in her theory that  
23 human beings' sources were nature, the self, the concrete other, and the abstract other (God or  
24 love). My thesis, thus deepened that knowledge and showed that the abstract other (I called it love),  
25 was superior to these sources of power, and that love had a deeper dignity than faith and hope.  
26 Love carries the strongest power, and faith and hope alone were not enough for becoming in health.  
27 My thesis showed that the substance of health is love, which, through the trinity of faith, hope, and  
28 love, also makes possible the existence of the source of strength. Love is connected with eternity  
29 and is the uniting link between temporality and eternity. The human being's inner longing entails  
30 an ontological attraction towards the source of strength. This source of strength is hidden, which  
31 provides and maintains its force, like a mystery connected with the darkness of suffering that hides  
32 the secret representing the source of strength (life's mystery) but which is revealed in both the  
33 darkness of suffering and in the light of joy. A humble fundamental attitude towards life constitutes  
34 the basis for a continuous dedication of vitality from this source.

2  
3 Eriksson (Lindström et al., 2018) had previously created so called axioms, one of which  
4 was: "Communion is the foundation of all human life. The human being is fundamentally  
5 interrelated to an abstract or a concrete other in community or communion" (p. 145). My thesis  
6 deepened the understanding of this axiom as the results of my thesis showed that it was love that  
7 formed the basis of the communion, and that it was thus love that formed the basis of all human  
8 life and not merely communion. I then reformulated the axiom on my own to say: "Love is the  
9 foundation of all human life and of communion. The human being is connected with the abstract  
10 other, the first love, which constitutes his/her essence and is the basis of communion with one the  
11 concrete other, the self and nature" (Hemberg, 2015, Attachment number 7. 1/2). Communion is  
12 a part of human life, of course, but it is not the deepest level. For example, we cannot have a  
13 deep relation with the other if love is absent. And then love is the strongest and first source of  
14 health. If we do not have love then we do not have the source of self, of nature, or the other. The  
15 monograph is written in Swedish, has a summary written in English (Hemberg, 2015, pp 234-  
16 245), and the thesis is available online at: <https://urn.fi/URN:ISBN:978-951-765-789-1>

Later, I published an article on the same topic along with my doctoral thesis supervisors (Hemberg et al., 2017), written in English.

**MM:** Thank you for sharing how you knew and studied with Dr Eriksson. I did not realize how your doctoral thesis work was connected to hers and that you actually suggested a change to one of her axiom's. Very remarkable! What do you think were Eriksson influences/origins of her theoretical thinking/theory?

**JH:** The main influences/origins of Professor Katie Eriksson's theory of caritative caring were Søren Kierkegaard, Hans-Georg Gadamer, & Emmanuel Lévinas. Others as well helped shape her theory such as the Greek philosophers Socrates, Plato, and Aristotle, the

1  
2  
3 Swedish theologian Anders Nygren, Thomas Kuhn, Karl Popper, Susan Langer, Eino  
4 Kaila (Finland), and Georg von Wright.  
5  
6

7  
8 For example, Emmanuel Lévinas (1989) influenced Eriksson regarding the notion of  
9 ontological ethics, or that ethics precedes ontology. She was very strict about this in every  
10 lecture. This underpinned for example the notion of ethical understanding which means that we  
11 cannot fully understand the other since this person represents something totally different and we  
12 can learn to get to know the other only by openness, meaning *being open towards the other*.  
13  
14 According to Lévinas, openness to the other is characterized by *sensitivity* and *vulnerability*.  
15  
16

17  
18 Then in regard to caring, it is required of the caregiver that they show a constantly open  
19 invitation to the other (to the suffering person/the patient); to come forward in his or her nudity.  
20  
21 Lévinas (1989) says that the nudity of the face is a call to action through the honesty directed at  
22 me and from the address of the face. The caregivers open invitation demands answers, which  
23 means that I can no longer fail to take responsibility. It is about an ethical responsibility being  
24 awakened in the caregiver in the encounter with the patient.  
25  
26

27  
28 Hans-Georg Gadamer (1996) influenced Eriksson to use a hermeneutical approach and  
29 hermeneutical thinking in the caritative caring tradition. Gadamer (1996) noted that when we  
30 encounter and meet others, we can better understand ourselves. Interpretation is one key to  
31 understanding, and understanding is seen as a hermeneutical movement. Humbleness and  
32 openness were other keys to Gadamer's thinking that Eriksson used. Gadamer (1996) stated with  
33 regards to understanding of the text that hermeneutically trained must be sensitive to the text, and  
34 "the important thing is to be aware of one's own bias, so that the text can present itself in all its  
35 otherness and thus assert its own truth against one's own fore-meanings" (pp. 271-272). Inspired  
36 by Gadamer, Eriksson argued that by asking questions of a text the reader could grasp a new  
37

understanding. Below is my own interpretation of how Eriksson interpreted the hermeneutical spiral according to Gadamer's thinking:

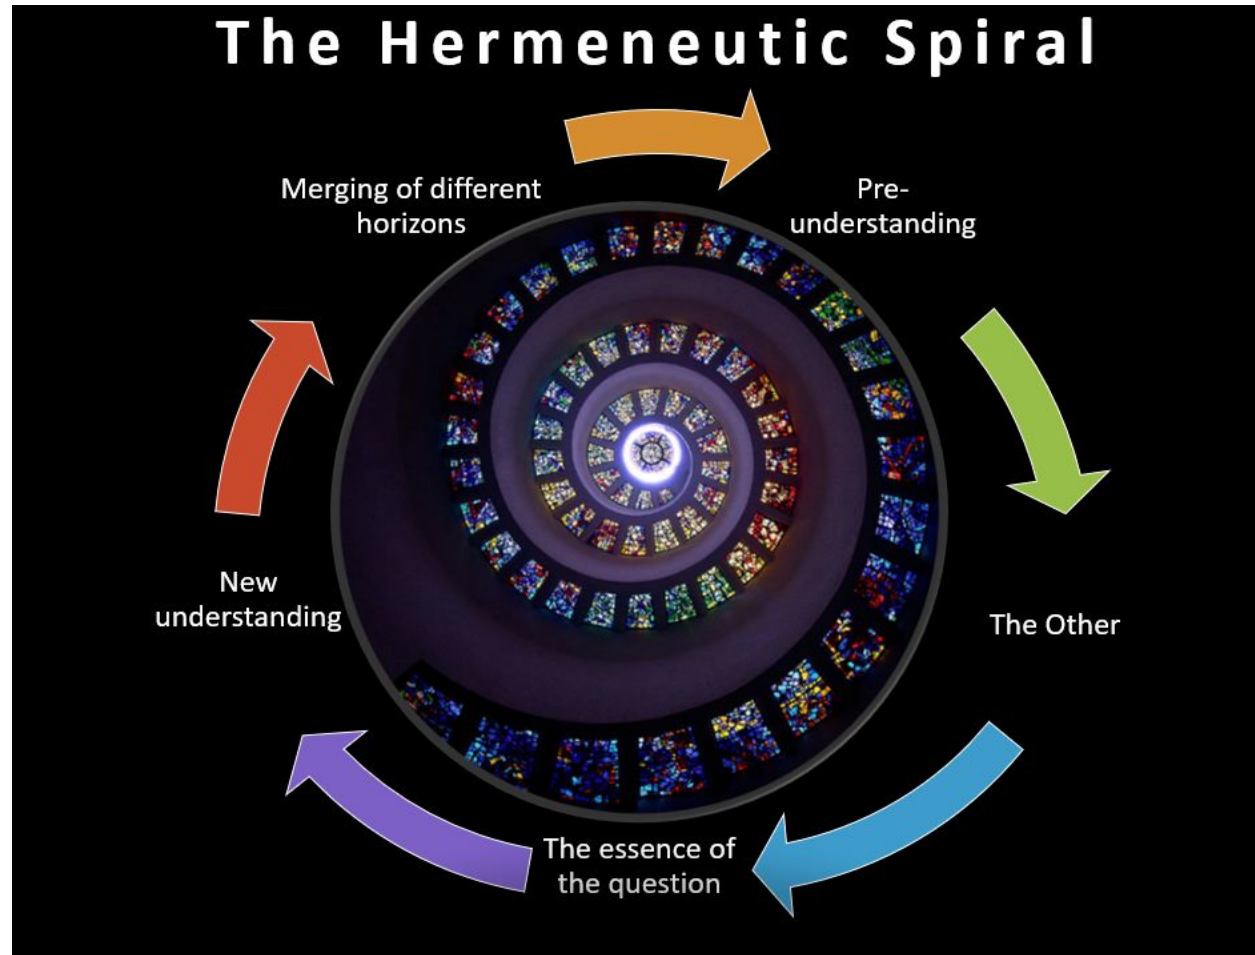

Figure 1. Eriksson's hermeneutical spiral, inspired by Gadamer's thinking (Hemberg's own modified figure from listening to Professor Eriksson's lectures)

**MM:** Where do you see the future of Dr. Eriksson's theory going?

**JH:** We have in the caritative caring theory a strong tradition regarding spiritual dimensions and the existential that has formed a special and unique niche of the theory that I feel we need to protect and further develop. The need to care and to always see the human being behind the patient and to protect their vulnerability, thereby protecting and

1  
2  
3 rebuilding the dignity of the human being, is becoming increasingly important in today's  
4  
5 rapidly changing and high-tech society.  
6

7  
8 First, we need to take further steps to explore the spiritual dimension of her theory, the  
9  
10 unity of body, soul & spirit. We must also continue to test and explore the theory of caritative  
11  
12 caring's central concepts in different clinical settings and care contexts and implement them in  
13  
14 healthcare practices. While the theory is strong due to Eriksson's focus on developing the theory,  
15  
16 the concepts, and her basic research, we need to study and implement the theory in the clinical  
17  
18 context. Of course, we must further develop this theory by demonstrating that ethics must  
19  
20 permeate the professional nursing care, connecting to an inner ethos. Eriksson's caritative caring  
21  
22 theory involves a broad-mindedness concerning all that is human, providing an opening for a  
23  
24 new way of viewing the world and therefore the theory may also be implemented within other  
25  
26 contexts. We must continue to plant seeds of love and ethics as the basis for all caring within  
27  
28 different nursing contexts for future generations to come. There is some confusion for those that  
29  
30 do not know this theory when we talk about love of the patient. We mean the human humbleness  
31  
32 and humility towards a human being. I think it is important to continue to use these strong  
33  
34 concepts and words even if misunderstood. Words are important and have such power to even  
35  
36 destroy a person and ruin a person's dignity and self-image. If you have the right words or  
37  
38 ethically loaded words, and the ethos or love for the other, you can rebuild a person's dignity and  
39  
40 self-worth. Words are important in our tradition, so I would like to see this continue. in our  
41  
42 tradition. For example, *Only through the inner core of ethos and love within caring bears the*  
43  
44 *potential of enhancing the patient's wellbeing and health.*  
45  
46  
47  
48  
49  
50

51 The relationships between the concepts need to be further tested within clinical contexts.  
52  
53 This entails operationalizing the main concepts to more precise definitions from clinical  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 contexts, in order to see how the caritative caring theory receives support in the reality of a  
4  
5 caring context. While there is lots of basic research on suffering for example, the inner  
6  
7 existential dimensions of the concepts of health and suffering together with their mutual  
8  
9 connections need to be displayed within different clinical settings. The relationships between the  
10  
11 main concepts within the theory also need to be tested within different clinical settings and care  
12  
13 contexts.  
14  
15

16  
17 Another issue I believe that needs to be established within the caritative caring theory is to  
18  
19 develop a broader perspective on the unique patient within a life context. Eriksson mentioned  
20  
21 that the human being's inner wealth is their culture and their history and that no matter where the  
22  
23 human being is in the world, they carry with them their own culture and a historical context. The  
24  
25 part that is, so to speak, all around the human being, their life context, belonging to close people,  
26  
27 such as family and friends, and other life circumstances needs to be developed and integrated  
28  
29 into the theory. We always need to bear in mind that a human being has their own  
30  
31 luggage/baggage, and we cannot know what they have been through or carry with them.  
32  
33 Therefore, the theory needs to broaden the perspective of the human being, to also include their  
34  
35 life circumstances and cultural issues. We need to view and encounter every human being as a  
36  
37 *secret writing* (cf. Piltz, 1991), meaning that we cannot take anything for granted and we should  
38  
39 be open to what persons express, even though the human being might be familiar to us. Although  
40  
41 we *think* we know what they need and desire because we have cared for them previously, they  
42  
43 might express something unexpected and new, even to them. This means nurses must also hinder  
44  
45 our prejudices and instead be open to new nuances and expressions in the human being or the  
46  
47 patient they encounter. By this I mean that humbleness is a key virtue to cherish within caring,  
48  
49 because judging someone does not belong in a caring context where you put the human being at  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 the center of everything and you want to protect and maintain their dignity – similar to the saying  
4  
5 “you can never know how a person is doing if you have not walked a mile in his shoes.” If you  
6  
7 are humble when you meet others, you will learn something about them and yourself.  
8  
9

10 **MM:** Since working with Dr Eriksson, what have you worked on related to nursing  
11  
12 science?  
13

14 **JH:** Since my doctoral thesis I have studied a variety of related nursing science concepts  
15  
16 in a variety of contexts. Some years ago, I studied the concept of suffering (within  
17  
18 different nursing contexts). The findings of my first study (Hemberg, 2017a) showed that:  
19  
20 Suffering is portrayed as a deep darkness. The suffering human being is filled with  
21  
22 hopelessness and meaninglessness and feels homeless in life. There is often a hidden  
23  
24 inner longing in the midst of suffering that may be uncovered. Embracing the dark corner  
25  
26 of the heart, the suffering, provides the keys for initiating a movement towards its  
27  
28 alleviation and implications for how to encounter a suffering human being within  
29  
30 different caring contexts. I also conducted a study on how to alleviate or find the keys to  
31  
32 alleviate suffering (Hemberg, 2017b).  
33  
34  
35  
36  
37  
38

39 I have since then collaborated with colleagues from Sweden to study the concepts of  
40  
41 compassion and dignity in different care settings/contexts, such as home care and palliative care.  
42  
43 The results of one study on mediating compassion (Hemberg & Gustin Wiklund, 2019) produced  
44  
45 four themes: *Encountering one another as human beings*, *being in the moment*, *bearing*  
46  
47 *responsibility for the other*, and *being in a loving communion*. The overall theme was *acting*  
48  
49 *from one's inner ethos, a heart of goodness and love*. We also found that mediating compassion  
50  
51 as belonging can be interpreted as the *component* that holds the caring relationship together and  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 unites the different levels of health as doing, being, and becoming in the ontological health  
4  
5 model. Further research should focus on revealing compassion from the perspective of patients.  
6  
7

8 In a qualitative study I was involved in Gustavsson and Hemberg (2021) explored  
9  
10 compassion fatigue as a bruise on the soul. Our findings showed: Compassion stress and  
11  
12 overload can lead to compassion fatigue. Compassion fatigue affects the nurse's ability to feel  
13  
14 anything, or to be compassionate, and then the caring is no longer experienced in the same way;  
15  
16 the nurses experienced it as being deprived of the gift of compassion. Compassion fatigue  
17  
18 implicates a crisis with potentially valuable insights. Compassion fatigue can be symbolized as  
19  
20 bruises in the soul, hurtful, but with time it can fade away, although it leaves a sense of caution  
21  
22 within the nurse, which can affect the suffering patient. Nurses feel a shame when they hurt like  
23  
24 this, and need to know what this is, and that nothing is wrong with them, they might just need  
25  
26 some time off.  
27  
28  
29

30  
31 Another colleague and I (Hemberg & Bergdahl, 2019a) have been studying the concepts  
32  
33 of ethical sensitivity, perceptiveness, through co-creation in palliative home care. That study  
34  
35 showed that through ethical sensitivity and perceptivity, nurses in palliative home care can  
36  
37 balance their actions in the moment and change their nursing care actions according to the  
38  
39 patient's wishes through co-creation in the nurse-patient encounters. Here the time is crucial, as  
40  
41 the time needed is unique to each patient. If nurses fail to be sensitive and perceptive in  
42  
43 encounters with dying patients, good palliative home care cannot be achieved. Ethical sensitivity  
44  
45 and perceptiveness can also be considered a part of nurses' ethical competence. Patients' dignity  
46  
47 can be preserved through ethical sensitivity and perceptiveness, which is fundamental for good  
48  
49 palliative care. We noted that co-creation from patients' perspectives should be the focus of  
50  
51 future research. Another study we (Hemberg & Bergdahl, 2019b) conducted within the home  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 care showed that co-creation can be viewed as an essential part of caring and being involved in  
4 patients' health and holistic care is a profound endeavor. Currently we have also explored  
5  
6 leaders' perceptions on ethical sensitivity and compassion in home care and its association to  
7  
8 quality of care and to staff competence. This study is currently under review.  
9  
10  
11

12 Another recent study (Hemberg, et al., 2020) I have been involved in has been on longing  
13 and well-being among frail older adults in home care. The study results uncovered three  
14 themes: *Longing for social contacts, longing for nature, and longing creativity, aesthetics, and*  
15 *music*. Longing was positively related to well-being when the older adults were able to fulfil their  
16 longings. The study provides an understanding of the mechanisms of longing among frail older  
17 adults. Longing, here, is an inner resource for setting into motion the transition towards well-  
18 being. Further studies could focus on how frail older adults can be supported to combat the  
19 negative forms of longing in daily life.  
20  
21  
22  
23  
24  
25  
26  
27  
28  
29

30  
31 Other colleagues and I have studied loneliness amongst older adults and adolescents and  
32 young people from a caring science perspective. Hemberg, et al.'s, (2018) study findings with  
33 older adults resulted in one main category and three subcategories. The main category was as  
34 follows: *Being homeless in life-loneliness expressed and primarily stemming from existential*  
35 *suffering*. The subcategories were as follows: *Loss of communion with one's partner or other*  
36 *loved ones, loss of meaningful social activities due to isolation, and loss of health due to frailty*  
37 *and vulnerability*. This study contributes to an understanding of experiences of suffering from  
38 loneliness in older adults receiving home care, with relevance for the healthcare context as well  
39 as for what a community or society should focus on when addressing these important issues.  
40  
41  
42  
43  
44  
45  
46  
47  
48  
49  
50

51 Within the project on loneliness, I have also been involved in looking at the lived experience  
52 of loneliness in adolescents and young people (Hemberg, et al., 2021) and their thoughts about  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 alleviating loneliness (Sundqvist, & Hemberg, 2021). The results from Hemberg, et al.'s (2021)  
4  
5 study found two main themes and seven subthemes. Negative experiences of involuntary  
6  
7 loneliness were stressful and paralyzing giving rise to physical symptoms, emptiness, anxiety, fear,  
8  
9 and invisibility. Other negative experiences resulting from involuntary loneliness were shame,  
10  
11 self-blame, and self-contempt, as well as meaninglessness, hopelessness, and exclusion. Positive  
12  
13 experiences from self-chosen solitude were freedom, calmness and recovery, creativity, and  
14  
15 meaningfulness as well as reflection, recharging, and personal growth.  
16  
17

18  
19 Another interesting study I (Hemberg, 2019) worked on involved caring ethics within the  
20  
21 student healthcare context. This study showed a main theme of *Caring ethics as the foundation*  
22  
23 *for enabling cultural competence*; followed by the subthemes: *Cultural competence as*  
24  
25 *knowledge and acting accordingly with open-mindedness and respect, cultural competence as*  
26  
27 *being willing to understand and learn through a process, cultural competence as responsiveness*  
28  
29 *and adaptability, and cultural competence as humility and discretion*. Ethics can be considered a  
30  
31 core component of cultural competence in student healthcare. In further research, a focus should  
32  
33 be placed on cultural competence as perceived from other (for example students') perspectives.  
34  
35  
36

37  
38 I have recently collaborated with colleagues from Norway associate professor Oscar  
39  
40 Tranvåg and professor Dagfinn Nåden (2022) on dignity humiliation as experienced by wives  
41  
42 caring for a home-dwelling husband with dementia. This article was accepted this spring by  
43  
44 *Health Care for Women International*.  
45  
46

47  
48 One of my doctoral students from Norway, *Anita Elvegaard*, is currently working on a  
49  
50 very interesting study on suffering and suicide. This study is ontologically rooted within the  
51  
52 caritative caring theory and particularly on the suffering theory of Eriksson. Her research  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 question is: What is it to be near by committing suicide, seen from suffering perspective? I am  
4  
5 looking forward to working on that. She will conduct both an integrative review and interviews.  
6  
7 Another interesting project I have been part of was looking at existential suffering with regards to  
8  
9 cancer survivorship (Ueland, et al., 2021). This was a collaborative project situated in Norway,  
10  
11 and we used Eriksson's caritative caring theory (Eriksson, 1989; Lindström et al., 2018) as a  
12  
13 framework for this study.  
14  
15

16  
17 Last year, I conducted an integrative review on ethical leadership with another colleague  
18  
19 (Hemberg, & Salmela, 2021). Our findings were: The permeation of integrity can be described as  
20  
21 efficient managerial nurse leaders leading relationships and processes by integrating a caring and  
22  
23 interactive team spirit and different leadership styles. Such value-based and caring interactions are  
24  
25 rooted in the nursing culture, which is the foundation of all activities in an organization. Through  
26  
27 an integrated leadership model comprised of leadership and management woven together by  
28  
29 integrity, efficient managerial leadership in nursing care can be strengthened. We have also  
30  
31 conducted focus group interviews on the same topic with nursing leaders and are currently  
32  
33 analyzing the data. We hope to publish these findings this autumn. Lastly, I have another very  
34  
35 interesting study in progress on ethical dilemmas in the older adults' care context, but this study is  
36  
37 not ready yet but will be finished and published in autumn 2022.  
38  
39  
40

41  
42 **MM:** You have been busy! It is interesting to see how you have built your body of work.

43  
44 On another note, this dialogue will be published in our October 2022 issue. The theme of  
45  
46 that issue is *Time*. Would Dr. Eriksson have anything to say about the value of time?

47  
48  
49 Would you?

50  
51 **JH:** Eriksson developed her theories for over about 50 years and her interest was always  
52  
53 directed towards the fundamental questions of caring and a search inward towards the  
54  
55

1  
2  
3 core and ethos of caring. I think Professor Eriksson would emphasize that there are  
4  
5 timeless and eternal questions that deal now and 50 years from now with the human  
6  
7 being, with life, health, suffering, and care. Her latest collection of work *Caring Science:*  
8  
9 *The Science of Caring: About the Timeless in Time* published in 2018, even mentions  
10  
11 time.  
12  
13

14  
15 I believe that Professor Eriksson would have emphasized the importance of time more  
16  
17 and more in times like we are living in now. I think Eriksson would have particularly  
18  
19 emphasized the importance of time in her model of *the nursing care process*, or I believe this  
20  
21 should be done. The nursing care process can be related to the passage of time. I believe that  
22  
23 whether we give or not give time to a patient affects how the relationship develops and whether  
24  
25 one can talk about care at all. Also, time spent in an institution such as a hospital ward can also  
26  
27 be seen as a very different time than time spent in your own home. For example, when you enter  
28  
29 the hospital room and become a patient, you might immediately *lose* yourself. You might think  
30  
31 that you need to change your behavior and become a “patient” especially when you put on the  
32  
33 *patient clothes* the hospital requires you to wear. You become more tense and start to behave  
34  
35 differently and now you must follow rules (that may be different than our own habitual time to  
36  
37 do things during the day) like when to wake up in the morning, when to shower and so on. And  
38  
39 we as nurses might easily think we *own* the patients and that we can control them through  
40  
41 different routines on a ward. This however silences the patient and is offensive to their dignity  
42  
43 which is the opposite of the meaning of caring. Thus, care should be much more time flexible,  
44  
45 friendly, and person-centered. Otherwise, we cannot call it care.  
46  
47  
48  
49  
50

51  
52 Furthermore, experiences of vulnerability and fragility increase during a patient’s  
53  
54 suffering due to, for example, suffering in relation to one’s own self-image and one’s own being.  
55  
56  
57  
58  
59  
60

1  
2  
3 Also, patients in hospitals can be particularly sensitive. When the caregiver offers their time to  
4 convey love and compassion to the patient, this can provide relief in the patient's suffering and  
5  
6 pave the way for an experience of well-being despite a simultaneously existing suffering. I  
7  
8 believe that within caring there can be opportunities that can manifest themselves in blink-of-an-  
9  
10 eye-moments, but which can nevertheless mean a time span of strength and new potentials for  
11  
12 the human beings' health. Also, even if many argue that time costs money and resources, I also  
13  
14 want to remind them that a smile or positivity does not cost anything from the caregivers. But of  
15  
16 course, we need sufficient time to create trustful caring relationships where the patients can dare  
17  
18 to begin to tell us (nurses) about their troubles and wishes. And thus, a true caring can be formed,  
19  
20 in accordance with the patients' own wishes. However, if there is a caring culture reflecting time  
21  
22 as stress(ful), the patient does not dare to express their desires or needs for care because the  
23  
24 patient feels that the caregiver does not have time and is stressed and thus might try to protect the  
25  
26 caregiver from even more tense pressure and stress by silence.  
27  
28  
29  
30  
31  
32

33 I believe that every caregiver or nurse has a responsibility to brighten up the patient's life  
34  
35 with *caritas* and *claritas* and then as well as to carry *ethos* forth to the patient. This is an ethical  
36  
37 moment, which creates a caring in the room in the moment (a sort of hidden moment of inner  
38  
39 time). This enables the patient to feel secure and a feeling of *at homeness* which can be *health-*  
40  
41 *giving*. Eriksson (2018) also noted that time is a concept that both can enrich the substance of  
42  
43 caring sciences and it can form or reshape caring. The presence of a caregiver can provide  
44  
45 comfort and relief for the patient when they are allowed to suffer out the suffering in communion  
46  
47 with another fellow human being. This can be caring only if the caregiver is able to be truly and  
48  
49 genuinely present in the moment, through listening to the suffering human being in the care, by  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 inviting the patient to this caring encounter, and through the posture reflect the ethos that is  
4  
5 timeless.

6  
7  
8 Another aspect of time is that the patient needs time to be in closeness to the caregiver  
9  
10 and other family persons (to get care and security and in order to experience communion), but  
11  
12 they also need time to separate from the caregiver and others, to make room to reflect inwards  
13  
14 and gather strength. These two needs need to be respected by the caregiver. The patient also  
15  
16 needs sufficient time to suffer and to recreate oneself since suffering and illness implies dying  
17  
18 from something and eventually evolving into a new entity.

19  
20  
21 In February 2022 my doctoral student and I (Ahokas & Hemberg, 2022) published a  
22  
23 qualitative study on moral distress in elderly care. This study also highlights the issue of time,  
24  
25 since moral distress can arise from a lack of time in a care context. Other findings were: moral  
26  
27 distress contributes to a sense of inadequacy but also a sense of responsibility, moral distress  
28  
29 arises from an imbalance in values, increased knowledge and open discussion help reduce moral  
30  
31 distress and reflection, and increased support and increased resources can reduce moral distress.  
32  
33 We will continue on this topic in her research studies this autumn.

34  
35  
36  
37  
38 Lastly, as I noted earlier in the study of "Ethical Sensitivity and Perceptiveness in  
39  
40 Palliative Home Care through Co-creation" (Hemberg & Bergdahl, 2019a) we found that time is  
41  
42 crucial, as the time needed is unique to each patient. Time is also an fundamental issue within  
43  
44 nursing, in order to enable true caring, nurses need enough time with patients to be able to  
45  
46 establish trust in the caring relationship. This is true in all caring contexts.

47  
48  
49 **MM:** What advice would you have for future nurse theorists, our readers, nursing faculty  
50  
51 and/or nurse service leaders?  
52  
53  
54  
55  
56  
57  
58  
59  
60

**JH:** This is a broad and challenging question. And I will give a broad and short answer. The most important thing, for both theorists and other persons active in nursing is to always have the human being in the center and always start from this. The fact that ethics precedes ontology means keeping the ethical alive in all circumstances, both in terms of research and in practice. It is about maintaining human dignity and strengthening it; to humbly listen to the human being or patient and strive to understand because theories and nursing should serve the human being and the suffering patient. It is by protecting the human being's dignity and their ethos, caritas, and claritas, that true and good care can be designed and created to be dedicated to the patient.

If you are interested in reading more of my research, you can find more information on researchgate.net: <https://www.researchgate.net/profile/Jessica-Hemberg-2> and on my research profile on Åbo Akademi University: <https://research.abo.fi/en/persons/jessica-hemberg>

**MM:** Jessica, thank you so much for your time today. I have enjoyed meeting you and hearing about how you came to know Dr Eriksson and how she influenced your work in nursing science.

### **Declaration of Conflicting Interests**

The authors declared no potential conflicts of interest with respect to the authorship and/or publication of this article.

### **Funding**

The authors received no financial support for the authorship and/or publication of this article.

Jessica Hemberg, RN, PhD
